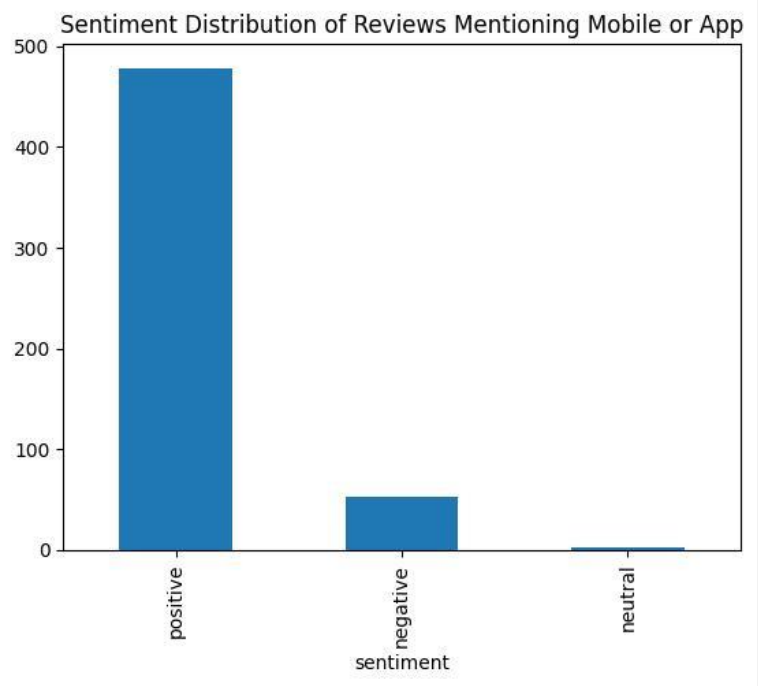
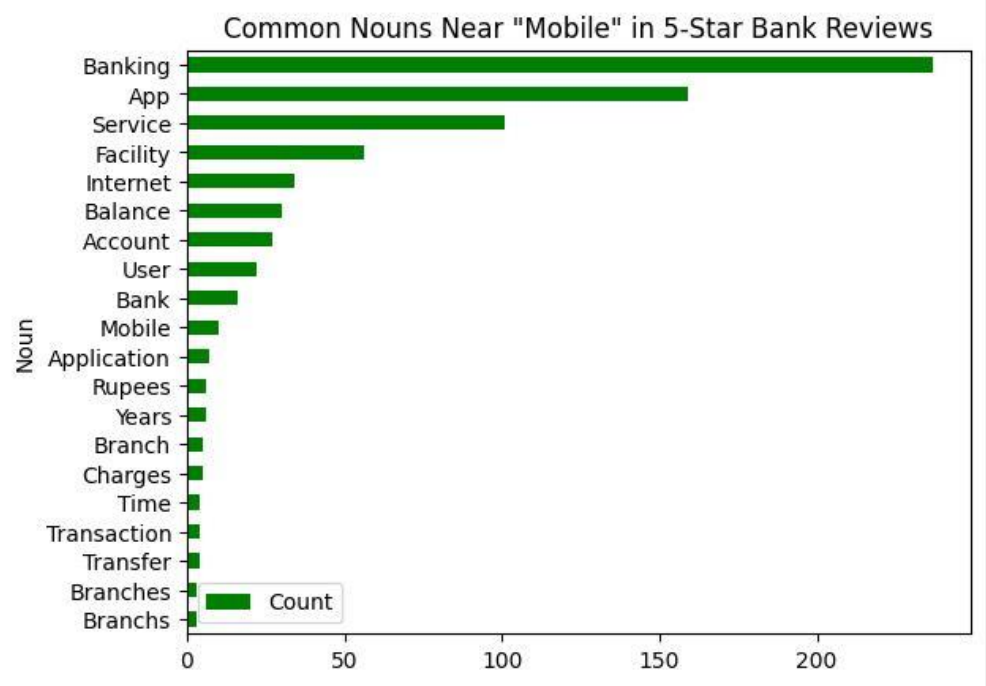
# BANK REVIEWS DATASET

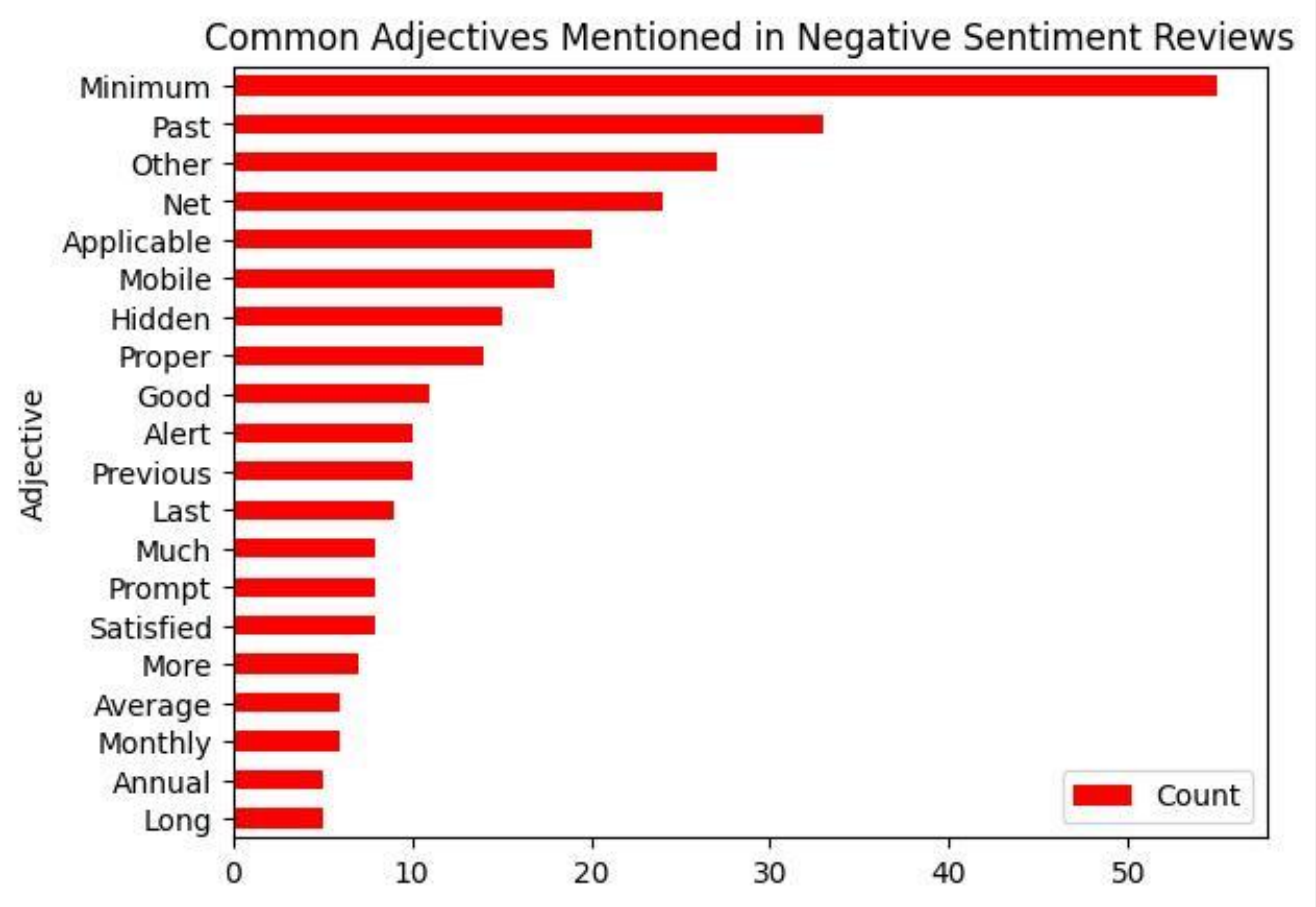
When analyzing data of all bank reviews, consumers generally rank their banks high, with majority of reviews being 4 stars or higher.

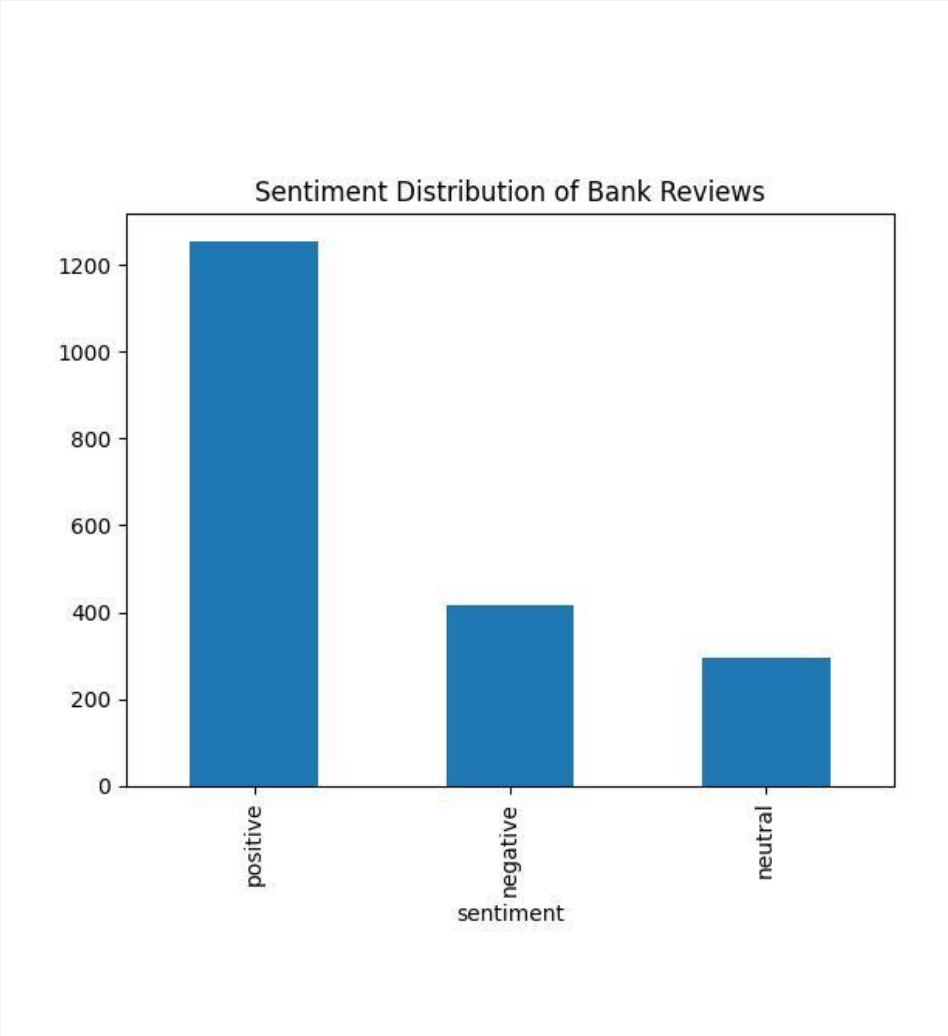
Data supports that consumers who are satisfied with their bank services are also happy with their mobile services. The most common nouns near ”mobile” within 5-star reviews are ”banking”, “app”, and “mobile”.





Data suggests that mobile-related factors rank in the top 6 of most common adjectives mentioned in negative sentiment reviews.



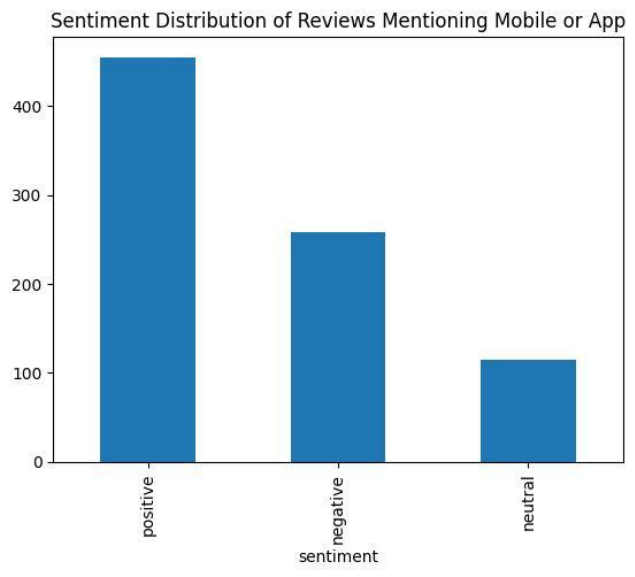


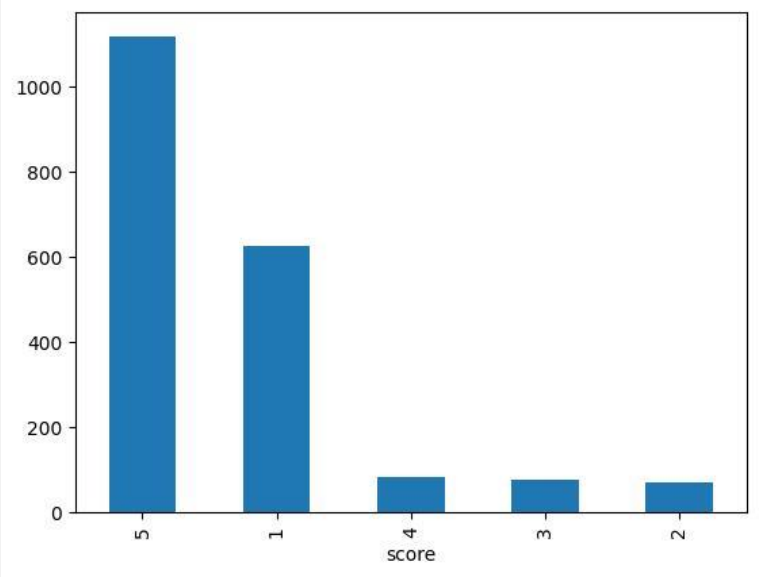
# PAKISTANI BANK APP REVIEWS DATASET

When analyzing data that is more specifically evaluating consumer perceptions of mobile banking apps, we see a different trend. There is more negative sentiment amongst reviews about mobile banking apps.

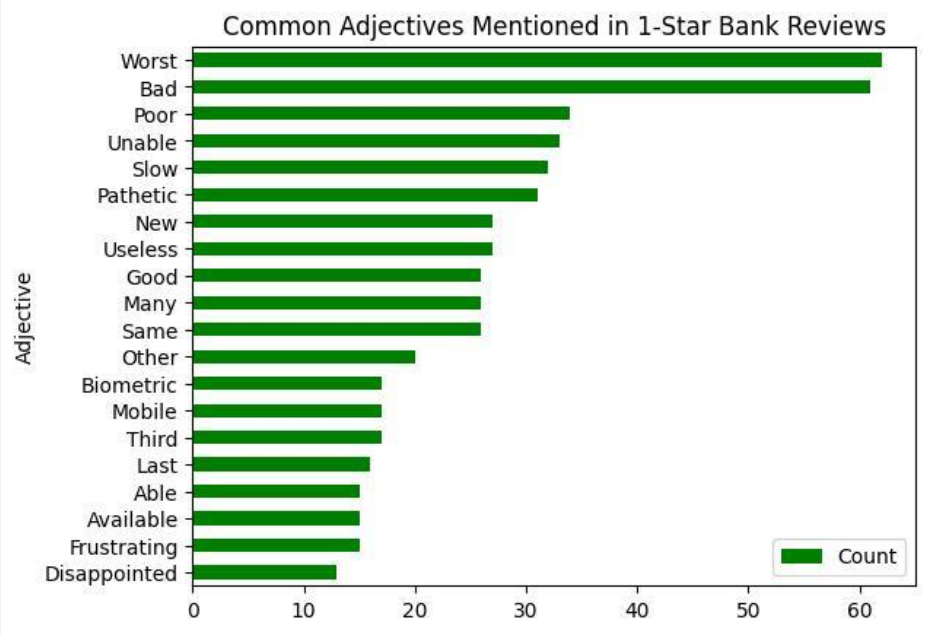
# CUSTOMERS VALUE MOBILE BANKING APP SERVICES

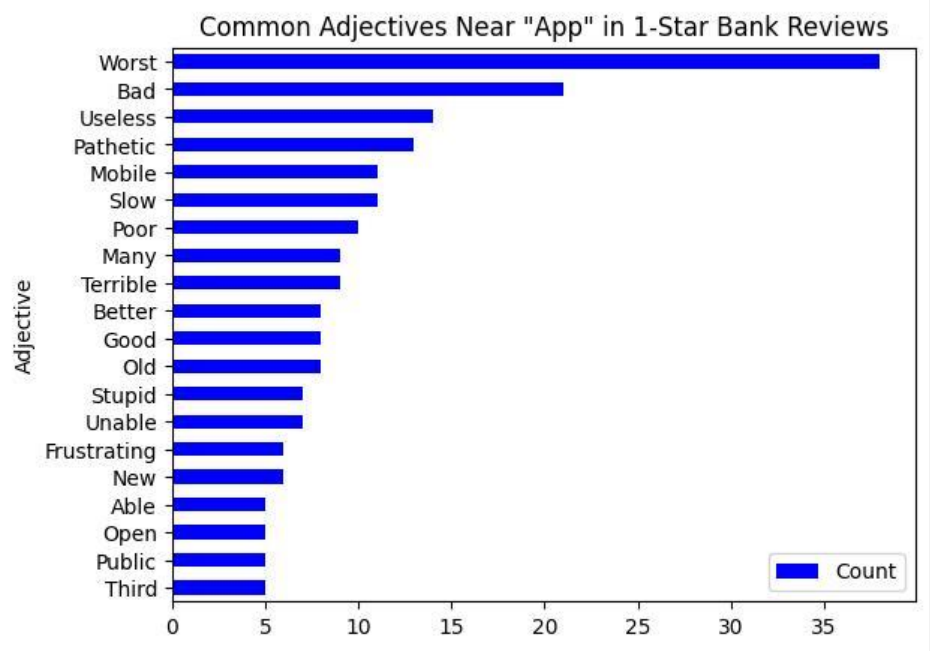
The data shows that the increased negative sentiment amongst reviews mentioning mobile or app also results in significantly higher one-star reviews, compared to the first dataset.

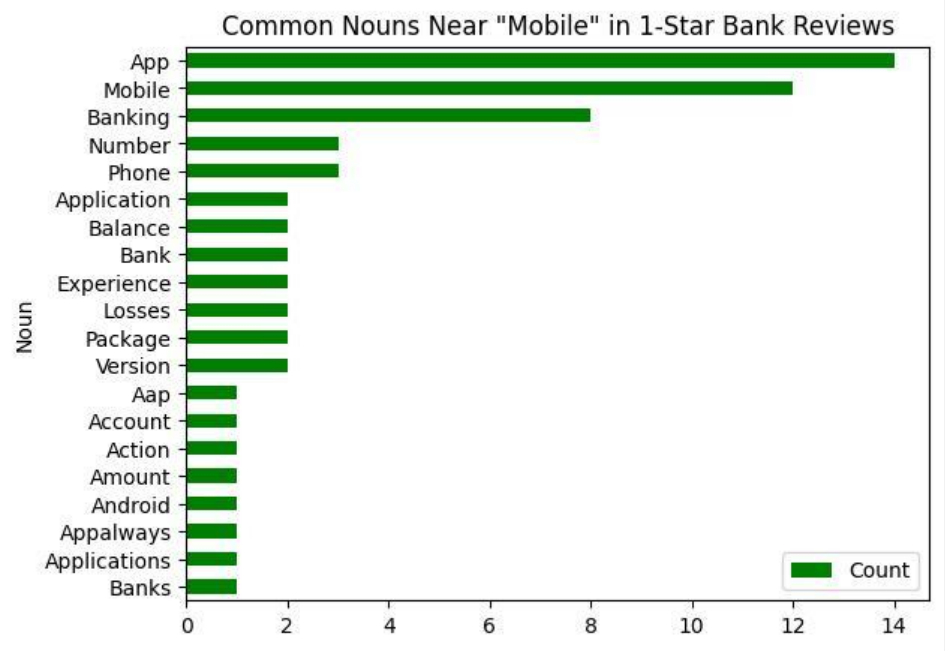


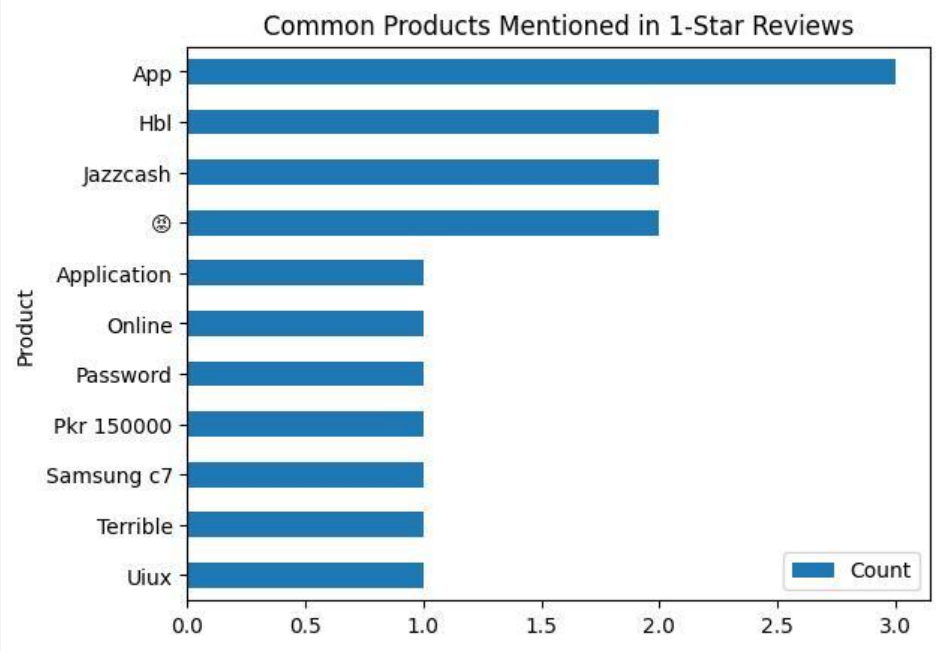


Data analysis of one-star reviews indicates that consumers weigh the performance and speed of mobile apps heavily in total score.



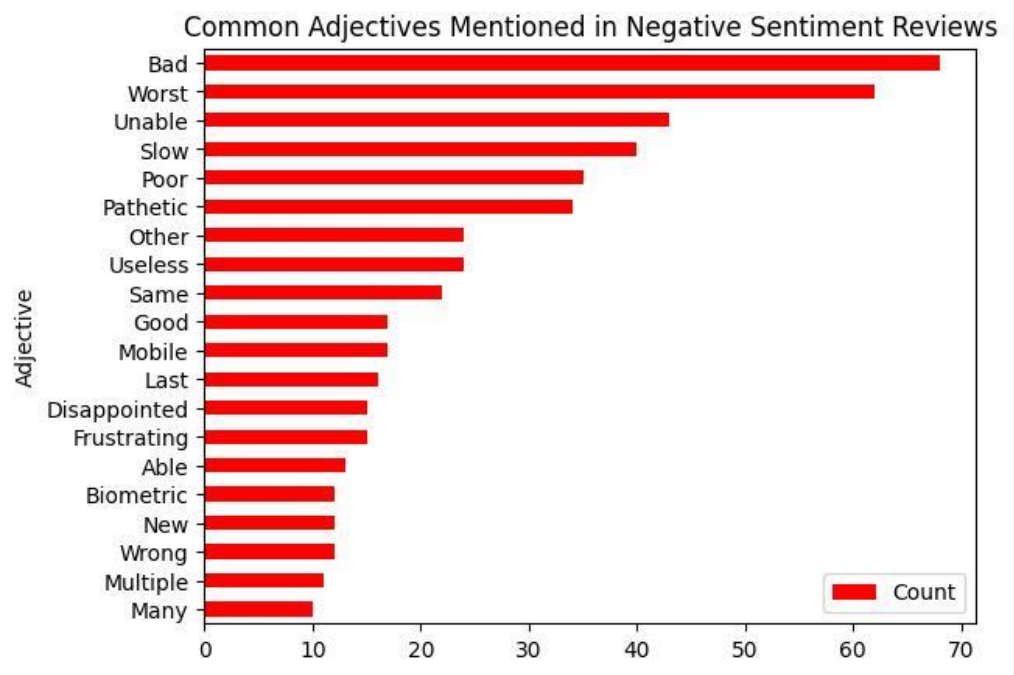






"App" is the most common product mentioned in one-star reviews. App, Mobile, and Banking also are the top 3 nouns near "mobile" in one-star bank reviews within the Pakistani Bank App Dataset.

Adjectives found in negative sentiment reviews in the Pakistani Mobile Banking App Dataset suggest that speed of the app is more important than biometrics. This analysis indicates the function and performance of mobile apps directly impacts the likelihood of a customer leaving a one-star review.



# DATA ANALYSIS RECOMMENDATION

Banks can increase customer satisfaction by focusing on improving mobile services, as issues related to mobile bank apps is the most common cause of negative sentiment. Within the mobile app, customers indicate that they prioritize speed and performance over more features.
